

LITHIUM BRINE OPPORTUNITY

This opportunity is based on:

Geology demonstrably favorable for lithium

Localized along a large structure in a major playa –
conceptual target is 10 miles X 25 miles

Major rhyolite dike along the structure at playa termination

Anomalous lithium (>100 ppb) in waters along structure

Target area measured in tens of kilometers

Western US state very favorable to mining

Mix of private and federal lands

Federal lands have no known significant environmental
complications

1 section (square mile) placer claims staked as a 'seed'

P. 2 Lithium Opportunity

Personal introduction

I have fifty years experience in 13 countries

I have experienced discoveries for lithium brine in Nevada and Argentina, gold, zinc and industrial minerals

I have executed my own regional lithium exploration program which resulted in location of a target in Utah which was leased and drilled by an Australian company

I have been a Certified Professional Geologist since 2008

I have written over 40 43-101 Technical Reports including several for lithium brine properties in Nevada, Utah and California

I am currently the Qualified Person for five companies including three lithium explorers

More information is available on my website: wfprogeo.com

P. 3 Lithium Opportunity

There are currently two common lithium targets in the US:
sediment-hosted mineralization
brine mineralization

Sediment-hosted mineralization which many people prefer because they give lithium analyses in the hundreds or thousands of ppm – are easier to promote BUT also have the complications of permitting large open pits and facilities and often have serious metallurgical issues

Brine targets are subtler, but can have much easier permitting and metallurgy

They tend to be in flat valleys or playas which often have less restrictive Federal land classifications plus wells are easier to permit than open pits

The metallurgy is either demonstrated or in advanced development.

Personally, I prefer brines.

P. 4 Lithium Opportunity

Plus

I do not break the bank.

I am interested in prosperity by making things happen,
not by having the best deal on the block.
